

# PROTECTION PROGRAM

## Permagard. The company.

Permagard is a market leader in paint protection technology; protecting over twenty billion dollars worth of aircraft, automobiles and yachts globally. Permagard was founded in France in 1997 and now has operations in 23 countries to service the major Aviation, Automotive and Marine markets around the globe. The company specialises in the manufacturing and application of high performance protective coating products that have been engineered to perform in the toughest of environments.

## How does Permagard work?

The coating creates a unique plasticised barrier. Unlike wax or polish it molecularly bonds to paintwork, leaving a glass-like finish, which prevents oxidising and fading.

Once the Permagard coating has been professionally applied to your vehicle, it chemically bonds to the painted surface completely insulating and protecting the new paint from the extremities of the environment. The Permagard coating will protect your paint from a lifetime of common contaminants such as acid rain, bird lime, tree sap and damaging ultra violet rays.

## Why 'reactive' polymer?

We call our plasticised coating ingredient 'reactive' polymer because of a locking reaction that takes place at a molecular level deep inside the porous paint surface, bonding and locking the coating to the paint. Most 'wipe on' waxes and sealants do not chemically bond with the paint and quickly degrade or wash off leaving no protective coating at all.

## Aerospace protection technology.

Permagard's unique 'reactive' polymer technology was originally designed to protect large passenger jets, flying at speeds over eight hundred kilometres an hour through a temperature range of -50 to +50 degrees celsius.

Our reactive polymer technology was so effective it received worldwide Boeing and Airbus approval. As a result, Permagard is the only coating trusted and used by Qantas and Virgin Australia for complete paint protection. Modern day aircraft and automobiles are now painted with the same type of polyurethane paint. This is why we are confident, if Permagarded, your vehicle is protected by the most tested and proven coating technology on the market today.

“ With Permagard your vehicle will look like the day it was delivered and there is no better way to protect its appearance. ”

## Why choose Permagard?

- **Ultra Gloss**  
'Glass like' finish over and above factory paint scheme.
- **Ultra Violet Inhibiting Technology**  
Guarantees gloss and paint won't fade and oxidise.
- **Reduced Maintenance**  
Self-cleaning properties, repels dirt and grime, easier to wash with no need to wax and polish.
- **Stain Resistance**  
The first line of chemically bonded defence against animal and organic matter such as bird lime, tree sap and industrial pollution.
- **Paint Compatible**  
Permagard coatings are 100% paint compatible, containing no silicone additives or abrasives that can damage paint.
