

Antimicrobial Shield

BE THE SAFEST AIRLINE INSIDE & OUT

Permagard's Antimicrobial Shield is an approved aviation antimicrobial treatment, offering passengers and airline crew continual protection against deadly bacteria and viruses whilst travelling on an aircraft.

.....
SANITISE • SHIELD • PROTECT
.....

“ **Modern transportation, especially aviation, has become a major driver in spreading pandemic virus such as H1N1, Ebola, Novo Virus and SARS to countries and cities around the world.** ”

How it works

Permagard's Antimicrobial Shield treatment utilises the latest virus and germ killing Lysis Technology that is so effective, in laboratory tests, in most cases it kills 100% of viruses and germ pathogens instantly on contact.

Lysis technology attacks and kills virus and germs by puncturing the cell membrane of the microbe destroying its structure completely. A simple analogy would be that of a balloon landing on a bed of grass and being popped and destroyed.

By killing germs in this non-toxic method, rather than via alcohol, dehydration or by poison, the hypoallergenic properties of this treatment allow it to be used in confined environments such as cabins and cockpits.

The treatment is easily applied by fogging and once applied all treated surfaces will be protected for an extended period of time, even after cleaning.

Destruction of the microbe

Key properties and benefits

- Reduces the risk of passengers and aircrew contracting viruses and bacterial infections
- Kills most known viruses and bacteria
- Provides prolonged protection for 30 days Plus
- Treatment will not wash off even following a cabin deep clean
- Eliminates cabin odours for prolonged periods of time
- Protects air-conditioning ducts and filters against mildew and mould spore build-up
- Invisible to the naked eye and wont stain or discolour
- 100% food safe
- Boeing and Airbus certified (Boeing D6-7127 / AIMS 09-00-002)
- Works in conjunction with HPA Filters
- Quick and easy application
- Hypoallergenic and non-irritant
